

THE APP

Know what happened. And **what was done** about it.

Enid sits between your cameras and the people watching them. Incident reports, live video, and everything your operators need to know about your site — in one app, on your phone. No calling the monitoring center for an update.

01 REPORTS

The full account, not a phone call.

Every incident the center actions arrives as a report: what they saw, what they did, in order, in plain words, with the clip attached — and what they *didn't* do, and why.

02 LIVE VIEW & ALERTS

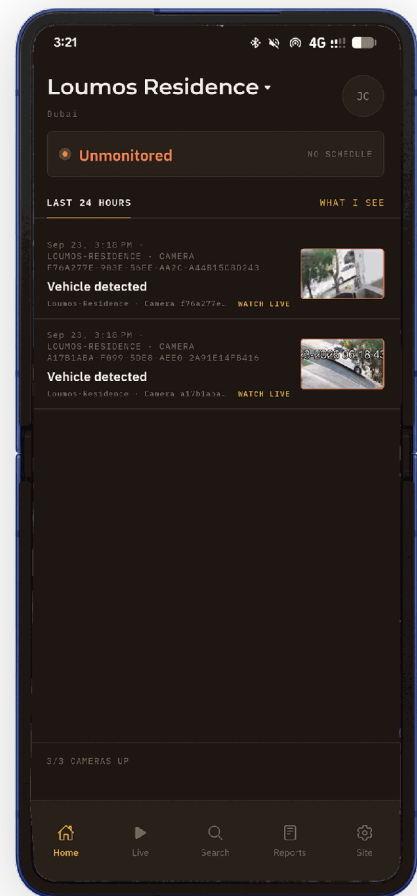

You see the alert — and you see it picked up.

A push notification the moment an event is raised, then confirmation in the app when the monitoring center takes it. Tap through to the footage that triggered it, or open live view — single camera or grid, mobile and web.

03 AI SEARCH

Find the clip in seconds.

The AI classifies every detection as it happens, so you filter by object, camera and time window — "Tuesday afternoon, back lot" — instead of scrubbing hours. Plain-language search is on the roadmap.

MONITORING CENTER
WHEN YOU'RE ON
WATCH

04 BE ON THE LOOKOUT

Brief operators without calling.

Submit a person, a license plate or a behavior to watch for, with a photo and a note. In front of the operator immediately; expires when you say.

05 SITE INFORMATION

Operators act on what you told them.

Expected visitors, who belongs on site, access lists, emergency contacts, your standard procedure — edited in the app, live for the operator.

06 CONTROL & EVIDENCE

Your hours. Your records.

Set the hours you're monitored and see site and camera health at a glance. Need something in writing later? Request a report — a rough window and one sentence — then export it with its clips for police or insurers.

WHERE IT COMES FROM

Built inside a monitoring center.

Enid was built on a live monitoring floor running **over 7,000 cameras** — shaped by real events and the way operators actually handle them, not by a VMS vendor's idea of what you need.

YOUR CAMERAS

Works with what you have. Standard ONVIF / RTSP cameras connect to the on-site Enid device — up to 64 per unit — with local recording and event storage in the cloud.

GETTING STARTED

Nothing to install on a PC. Web plus iOS and Android, signed in with an account you already have. Not monitored yet? You can connect a center from inside the app.

Enid — unified video, alarm, access and AI monitoring.

Available through authorized monitoring centers, MSPs and installers. Feature availability depends on your camera hardware and the plan your provider has enabled. Roadmap items are marked as such and are not part of the current release.
